Synthetic Financial Risk Report

Entirely fictional aggregate data for FinRAG automated tests

Scenario Overview

The baseline scenario describes a fictional institution with stable liquidity, diversified funding, and no customer-level information. All values were created exclusively for testing.

Synthetic Metrics

Metric	Value	Unit
Liquid assets	125.0	BRL million
Thirty-day outflows	82.0	BRL million
Liquidity coverage	152.4	percent

Adverse Scenario

Synthetic assumptions and interpretation limits

Stress Assumptions

The adverse scenario applies a fictional 20 percent deposit outflow, a temporary wholesale funding disruption, and a 150 basis point increase in credit spreads.

Under these assumptions, the synthetic liquidity coverage ratio remains above 110 percent. This result is not a forecast and does not describe any real organization.

Test Provenance

This PDF contains selectable text, two physical pages, no encryption, no JavaScript, no attachments, and no personal or confidential data.

Purpose

Exercise deterministic validation, extraction, page isolation, and chunking.
